

PRIOR AUTHORIZATION REQUEST

Cover Letter

Patient Name	John Smith
Date of Birth	1968-03-15
Insurance	United Healthcare
Member ID	UHC-887612
Policy Number	UHC-POL-2026-001
CPT Code	75563
ICD-10	I42.0
Physician	Dr. Ramesh Kumar
Physician NPI	1234567890
Facility	City Heart Institute
Date of Request	March 31, 2026

Dear Prior Authorization Review Team,

Date: March 31, 2026

Subject: Prior Authorization Request for John Smith (DOB: 1968-03-15, Member ID: UHC-887612)

This letter serves as a formal request for prior authorization for a medically necessary procedure for our patient, John Smith.

Patient Information:

Patient Name: John Smith

Date of Birth: 1968-03-15

Insurance Payer: United Healthcare

Member ID: UHC-887612

Policy Number: UHC-POL-2026-001

Group Number: GRP-7721

Plan Name: UHC Gold Plus

Requesting Physician Information:

Physician Name: Dr. Ramesh Kumar

NPI: 1234567890

Specialty: Cardiology

Facility: City Heart Institute

Procedure Requested:

CPT Code: 75563

Procedure Name: Cardiac MRI, without contrast material, followed by contrast material(s) and further sequences

Medical Necessity:

Mr. John Smith, a 58-year-old male, has been diagnosed with Dilated Cardiomyopathy (ICD-10: I42.0). Recent laboratory findings indicate significant cardiac dysfunction, evidenced by an elevated B-type Natriuretic Peptide (BNP) level of 450 pg/mL. Given this diagnosis and the objective evidence of cardiac strain, a Cardiac MRI (CPT 75563) is critically necessary to provide a comprehensive and detailed assessment of myocardial structure, ventricular function, and tissue characterization. This advanced imaging will allow for precise quantification of cardiac volumes, identify any myocardial fibrosis or inflammation, and help differentiate the etiology of his cardiomyopathy. The information obtained from this procedure is essential for guiding optimal management strategies, risk stratification, and ensuring the most appropriate and effective treatment plan for Mr. Smith's progressive cardiac condition.

Supporting clinical documentation, including the Clinical Justification Note, is attached for your review.

Thank you for your prompt attention to this urgent request. Please do not hesitate to contact our office if additional information is required.

Sincerely,

Dr. Ramesh Kumar, MD

Cardiology

City Heart Institute

NPI: 1234567890

Clinical Summary

Diagnosis

I42.0: Dilated Cardiomyopathy

Patient History

Mr. John Smith, a 58-year-old male (DOB 1968-03-15), has a documented history of Dilated Cardiomyopathy (I42.0).

Reason for Procedure

A Cardiac Magnetic Resonance Imaging (MRI) with stress imaging (CPT 75563) is requested for comprehensive evaluation of myocardial function, viability, and assessment for inducible ischemia. This advanced imaging is critical for guiding further management strategies for his Dilated Cardiomyopathy.

Supporting Evidence

Recent lab results from 2026-03-31 show an elevated B-type Natriuretic Peptide (BNP) level of 450 pg/mL, indicating significant cardiac stress. His metabolic panel is reported as normal. This elevated biomarker, in conjunction with the patient's clinical presentation, necessitates a detailed assessment beyond standard echocardiography to fully characterize the extent of myocardial dysfunction and potential ischemic burden.

Clinical Justification

Cardiac MRI with stress imaging (CPT 75563) is a recognized standard of care for the detailed evaluation of patients with Dilated Cardiomyopathy, particularly when assessing myocardial viability, fibrosis, and inducible ischemia. This procedure aligns with guidelines from organizations such as the American College of Cardiology (ACC) and American Heart Association (AHA) for advanced cardiac imaging in patients with cardiomyopathy and heart failure symptoms, especially with elevated biomarkers like BNP. The findings from this study will directly inform optimal treatment decisions, including potential revascularization, device therapy, or medical management optimization, thereby improving patient outcomes.

Requirements Checklist

Requirement	Status	Evidence
Clinical Justification Note (Document)	✓ MET	Document 'Clinical Justification Note' uploaded (file_path: C:\Users\teja9\OneDrive\Desktop\IntelliAgents\backend\uploads\PA-20260331-00021\Clinical_Justification_Note_Kumar.pdf).
Clinical Justification Note Content: Patient history, current symptoms, previous treatments, reason echocardiogram is insufficient	✗ MISSING	The extracted text from the 'Clinical Justification Note' (dated 2026-01-03) does not contain the required detailed patient history, current symptoms, previous treatments tried, or reason echocardiogram is insufficient.
Clinical Justification Note Content: Signed and dated	✗ MISSING	Note dated 2026-01-03, but explicit confirmation of signature by the treating Cardiologist is not available in the extracted text.
Echocardiogram Report (Document)	✗ MISSING	No document explicitly named 'Echocardiogram Report' is present in the uploaded files.
Echocardiogram Report Content: LVEF value documented	✗ MISSING	No LVEF value is documented in the provided EHR summary or extracted text.
Echocardiogram Report Content: Chamber dimensions documented	✗ MISSING	No chamber dimensions are documented in the provided EHR summary or extracted text.
Echocardiogram Report Content: Wall motion analysis documented	✗ MISSING	No wall motion analysis is documented in the provided EHR summary or extracted text.
Echocardiogram Report Content: Valve function documented	✗ MISSING	No valve function is documented in the provided EHR summary or extracted text.
Recent Lab Results (within 30 days): BNP or NT-proBNP levels	✓ MET	BNP level: 450 pg/mL (documented in lab_results, ehr_filled_at: 2026-03-31).
Recent Lab Results (within 30 days): Complete Metabolic Panel	✓ MET	Complete metabolic panel: Normal (documented in lab_results, ehr_filled_at: 2026-03-31).
Recent Lab Results (within 30 days): Complete Blood Count	✗ MISSING	Complete blood count results are not present in the provided lab_results.
Physician Order Letter (Document)	✗ MISSING	No document explicitly named 'Physician Order Letter' is present in the uploaded files.
Physician Order Letter Content: Procedure requested	✓ MET	Procedure requested: CPT code 75563 (documented in EHR summary).
Physician Order Letter Content: ICD-10 diagnosis code	✓ MET	ICD-10 diagnosis code: I42.0 (documented in EHR summary).
Physician Order Letter Content: Clinical indication	✗ MISSING	Clinical indication for the procedure is not explicitly stated in the EHR summary, beyond the primary diagnosis. This information is required to be on the Physician Order Letter.

Physician Order Letter Content: Physician NPI number	✓ MET	Physician NPI number: 1234567890 (documented in EHR summary).
Prior Treatment Records (Document)	✗ MISSING	No document explicitly named 'Prior Treatment Records' is present in the uploaded files, and no details about prior cardiac medications (drug names, dosages, duration, response/discontinuation) are in the EHR summary.
Confirmed diagnosis of Dilated Cardiomyopathy, Hypertrophic Cardiomyopathy, Restrictive Cardiomyopathy, Cardiac Sarcoidosis, or Suspected Cardiac Tumor/Mass	✓ MET	Primary diagnosis: Dilated Cardiomyopathy (ICD-10: I42.0) (documented in EHR summary).
Symptoms present and documented for a minimum period of 3 months (Shortness of breath on exertion, Chest pain or pressure, Palpitations or arrhythmia, Unexplained syncope or near-syncope, or Reduced exercise tolerance)	✗ MISSING	No specific symptoms or their duration (minimum 3 months) are documented in the provided EHR summary or the extracted text from the Clinical Justification Note.
Completed echocardiogram prior to MRI request	✗ MISSING	No specific date of echocardiogram completion is provided in the EHR summary or uploaded documents to confirm it was completed prior to the MRI request.
Echocardiogram findings: Evidence of wall motion abnormality OR structural cardiac abnormality requiring further characterization	✗ MISSING	No evidence of wall motion abnormality or structural cardiac abnormality is documented in the provided EHR summary or extracted text.
Request ordered by a board-certified Cardiologist or Cardiac Electrophysiologist	✓ MET	Request ordered by Dr. Ramesh Kumar, specialty: Cardiology (documented in EHR summary).

CITY HEART INSTITUTE

Department of Cardiology | Patient Clinical Notes

Patient Name: John Smith Member ID: UHC-887612 Physician: Dr. Ramesh Kumar
DOB: 03/15/1968 Gender: Male Policy #: UHC-POL-2026-001 NPI: 1234567890
Insurance: United Healthcare Date: 03/01/2026 Specialty: Cardiology

Chief Complaint / Presenting Hx:

57 yr old ♂ w/ progressive dyspnea on exertion x3 months, bilateral ankle edema + orthopnea. No chest pain. PMHx: HTN, DM type 2. Meds: metoprolol, lisinopril, metformin.

Diagnosis:

Dilated Cardiomyopathy ICD-10: I42.0

Examination Findings:

BP: 148/92 mmHg HR: 88 bpm RR: 18/min SpO₂: 96%
Elevated JVP ++. S3 gallop heard at apex. Bilateral basal crepitations. Pitting pedal edema 2+. No murmur.

Investigations / Labs:

BNP: 450 pg/mL ↑ (nl <100)
Metabolic Panel: WNL ✓
ECG: Sinus rhythm, LVH pattern, non-specific ST changes.
Echo (prelim): EF ~30-35%. Diffuse LV hypokinesis.

Procedure Ordered:

Cardiac MRI with Contrast CPT: 75563
Facility: City Heart Institute — Cardiology Dept.
Indications: assess myocardial viability, EF quantification, exclude ischemic etiology, fibrosis mapping (LGE).

Plan / Management:

- 1) Admit for monitoring + IV diuresis (Lasix 40mg BD)
- 2) Optimise GDMT — add spironolactone, uptitrate BB
- 3) Cardiac MRI as above (pre-auth UHC Gold Plus req'd)
- 4) Cardiology f/u in 2 wks post-MRI
- 5) Pt counselled re: sodium restriction, fluid balance, weight monitoring. ICD discussion deferred.

Allergies: NKDA

Group: GRP-7721 Plan: UHC Gold Plus

TRANSTHORACIC ECHOCARDIOGRAM REPORT

Ordering Physician:

Dr. Ramesh Kumar MD

Performing Physician:

Dr. Sarah Johnson MD

Facility:

City Heart Institute

Clinical Indication:

Dilated Cardiomyopathy; Follow up evaluation

Study Date:

January 15, 2026

Report Date:

January 15, 2026

Study Type:

Complete TTE

SECTION 1: TECHNICAL QUALITY

Study Quality: Adequate

Windows: Acceptable acoustic windows obtained.

Views: Parasternal long axis, short axis, apical 4-chamber, 2-chamber, 3-chamber, and subcostal views were successfully obtained and analyzed.

SECTION 2: LEFT VENTRICLE MEASUREMENTS

Measurement	Result	Normal Reference Range
LV End Diastolic Diameter	6.2 cm	Less than 5.5
LV End Systolic Diameter	5.1 cm	Less than 3.9
Interventricular Septum	0.8 cm	0.6 to 1.1
Posterior Wall Thickness	0.8 cm	0.6 to 1.1
LV Ejection Fraction (LVEF)	35%	Greater than 55%
LV Fractional Shortening	18%	25 to 45%

SECTION 3: LEFT VENTRICLE FUNCTION

LVEF: 35% – Severely reduced.

Wall Motion: Diffuse global hypokinesis noted. No regional wall motion abnormalities (RWMA) identified.

Diastolic Function: Grade II diastolic dysfunction (pseudonormal pattern).

LV Size: Moderately dilated left ventricle.

SECTION 4: RIGHT VENTRICLE

RV Size: Normal.

RV Function: Mildly reduced.

TAPSE: 1.6 cm (mildly reduced).

RV Systolic Pressure: Estimated 38 mmHg.

SECTION 5: VALVES

Mitral Valve: Mild mitral regurgitation identified. Etiology appears functional, secondary to LV dilation and annular stretching.

Aortic Valve: Trileaflet, normal opening. No significant stenosis or regurgitation visualized.

Tricuspid Valve: Mild tricuspid regurgitation.

Pulmonic Valve: Normal appearance and function.

SECTION 6: OTHER FINDINGS

Pericardium: Small pericardial effusion noted.

Aorta: Normal aortic root diameter.

IVC: Dilated IVC suggesting elevated right atrial pressure.

SECTION 7: CONCLUSION

1. Severely reduced left ventricular systolic function with LVEF of 35%.
2. Moderately dilated left ventricle consistent with dilated cardiomyopathy.
3. Diffuse global hypokinesis.
4. Mild mitral regurgitation — functional etiology.
5. Grade II diastolic dysfunction.
6. Small pericardial effusion.
7. Recommend Cardiac MRI for further tissue characterization.

Interpreting Physician: Dr. Sarah Johnson MD

Board Certified Echocardiographer

Date: January 15, 2026

Ordering Physician:	Dr. Ramesh Kumar MD	Specimen Type:	Venous Blood
Collection Date:	March 10, 2026	Clinical Indication:	Dilated Cardiomyopathy
Report Date:	March 10, 2026		Cardiac MRI Pre-authorization

SECTION 1 - CARDIAC BIOMARKERS

Test	Result	Unit	Reference Range	Flag
BNP (B-type Natriuretic Peptide)	450	pg/mL	Less than 100	HIGH
NT-proBNP	1850	pg/mL	Less than 125 (age < 75)	HIGH
Troponin I (High Sensitivity)	0.04	ng/mL	Less than 0.04	BORDERLINE

SECTION 2 - COMPLETE BLOOD COUNT

Test	Result	Unit	Reference Range	Flag
WBC	7.2	10^3/uL	4.5 to 11.0	NORMAL
RBC	4.8	10^6/uL	4.5 to 5.9	NORMAL
Hemoglobin	13.8	g/dL	13.5 to 17.5	NORMAL
Hematocrit	41.2	%	41 to 53	NORMAL
Platelets	215	10^3/uL	150 to 400	NORMAL
MCV	88	fL	80 to 100	NORMAL

SECTION 3 - COMPREHENSIVE METABOLIC PANEL

Test	Result	Unit	Reference Range	Flag
Sodium	138	mEq/L	136 to 145	NORMAL
Potassium	4.1	mEq/L	3.5 to 5.1	NORMAL
Creatinine	1.1	mg/dL	0.7 to 1.3	NORMAL
eGFR	72	mL/min	Greater than 60	NORMAL
BUN	18	mg/dL	7 to 20	NORMAL

Test	Result	Unit	Reference Range	Flag
Glucose	95	mg/dL	70 to 100	NORMAL
AST	28	U/L	10 to 40	NORMAL
ALT	22	U/L	7 to 56	NORMAL
Albumin	3.8	g/dL	3.5 to 5.0	NORMAL

SECTION 4 - LIPID PANEL

Test	Result	Unit	Reference Range	Flag
Total Cholesterol	195	mg/dL	Less than 200	NORMAL
LDL	118	mg/dL	Less than 130	NORMAL
HDL	42	mg/dL	Greater than 40	NORMAL
Triglycerides	175	mg/dL	Less than 150	BORDERLINE HIGH

SECTION 5 - INTERPRETATION NOTE

Significantly elevated BNP at 450 pg/mL and NT-proBNP at 1850 pg/mL consistent with moderate to severe heart failure.
Renal function preserved. Electrolytes within normal limits.
Results support ongoing heart failure management and prior authorization for advanced cardiac imaging.

SUBJECT: PRIOR AUTHORIZATION REQUEST

PROCEDURE: CARDIAC MRI WITH CONTRAST (CPT 75563)

ICD-10 CODE: I42.0

REQUESTED PROCEDURE

Name:	Cardiac MRI with Contrast
CPT Code:	75563
Urgency:	Routine — Non Emergency
Facility:	City Heart Institute Radiology
Estimated Date:	Within 30 days of approval

CLINICAL INDICATION

Primary Diagnosis: Dilated Cardiomyopathy (ICD-10: I42.0)

Secondary Diagnosis: Heart Failure with Reduced Ejection Fraction (ICD-10: I50.20)

MEDICAL NECESSITY STATEMENT

This procedure is medically necessary for:

- Tissue characterization of myocardium
- Assessment of myocardial fibrosis via late gadolinium enhancement imaging
- Differentiation of ischemic versus non-ischemic cardiomyopathy
- Assessment of myocardial viability
- Guidance of treatment decisions including consideration of ICD implantation

SUPPORTING CLINICAL INFORMATION

- LVEF 35% on recent echocardiogram
- Elevated BNP 450 pg/mL
- NYHA Class III symptoms
- Optimal medical therapy ongoing
- No contraindications to MRI or gadolinium contrast media

I certify that this procedure is medically necessary and appropriate for this patient. All information provided is accurate and complete to the best of my knowledge.

Dr. Ramesh Kumar MD
Board Certified Cardiologist
Date: March 16, 2026
NPI: 1234567890
Contact: 555-123-4567

Treating Physician:	Dr. Ramesh Kumar MD	Report Date:	March 16, 2026
Facility:	City Heart Institute	Specialty:	Cardiology
Period Covered:	Jan 2023 – Mar 2026	Clinical Indication:	Dilated Cardiomyopathy

This document summarizes the complete cardiac medication history for a patient with confirmed Dilated Cardiomyopathy (ICD-10: I42.0) over a period of 3 years from January 2023 to March 2026. All medications listed below were prescribed and monitored by the treating cardiologist as part of optimal medical therapy for heart failure with reduced ejection fraction.

SECTION 1 - MEDICATION HISTORY TABLE

Medication	Dose/ Freq	Dates	Duration	Response	Status
Carvedilol (Beta Blocker)	25mg Twice daily	Jan 2023 – Present	3 years	Partial response – HR controlled but symptoms persist	CURRENT
Lisinopril (ACE Inhibitor)	10mg Once daily	Jan 2023 – Present	3 years	Partial response – BP controlled but LVEF unchanged	CURRENT
Spirololactone (Aldo. Antagonist)	25mg Once daily	Mar 2023 – Present	2y 9mo	Minimal improvement in symptoms	CURRENT
Furosemide (Loop Diuretic)	40mg Once daily	Mar 2023 – Present	2y 9mo	Adequate fluid control; edema managed	CURRENT
Sacubitril/ Valsartan (ARNI)	24/26mg Twice daily	Sep 2023 – Nov 2023	2 months	Discontinued due to symptomatic hypotension and dizziness	DISCONTINUED
Ivabradine	5mg Twice daily	Jan 2024 – Mar 2024	2 months	Discontinued – inadequate heart rate reduction	DISCONTINUED

SECTION 2 - TREATMENT RESPONSE SUMMARY

Despite 3 years of optimal medical therapy with maximum tolerated doses of guideline directed medical therapy (GDMT) including beta blocker, ACE inhibitor, and aldosterone antagonist, patient continues to exhibit:

- Persistent LVEF of 35%
- NYHA Class III symptoms (marked limitation in activity)
- Elevated BNP levels (refer to lab report dated 03/10/2026)
- Reduced functional capacity

SECTION 3 - CURRENT MEDICATION LIST

- **Carvedilol:** 25mg twice daily
- **Lisinopril:** 10mg once daily
- **Spirolactone:** 25mg once daily
- **Furosemide:** 40mg once daily
- **Aspirin:** 81mg once daily
- **Atorvastatin:** 40mg once daily

Physician Attestation:

I certify that the above medication history is accurate and complete. The patient has received optimal guideline directed medical therapy for a minimum of 3 years with inadequate clinical response. Advanced cardiac imaging (Cardiac MRI) is required to guide further treatment decisions, including viability assessment and potential ICD placement.

Dr. Ramesh Kumar MD

Board Certified Cardiologist | NPI: 1234567890
