

PRIOR AUTHORIZATION REQUEST

Cover Letter

Patient Name	John Smith
Date of Birth	1968-03-15
Insurance	United Healthcare
Member ID	UHC-887612
Policy Number	UHC-POL-2026-001
CPT Code	75563
ICD-10	I42.0
Physician	Dr. Ramesh Kumar
Physician NPI	1234567890
Facility	City Heart Institute
Date of Request	March 31, 2026

Dear Prior Authorization Review Team,

Date: March 31, 2026

****RE: Prior Authorization Request for John Smith****

Patient Name: John Smith

Date of Birth: 1968-03-15

Insurance Payer: United Healthcare

Member ID: UHC-887612

Policy Number: UHC-POL-2026-001

Group Number: GRP-7721

Requesting Physician: Dr. Ramesh Kumar

NPI: 1234567890

Specialty: Cardiology

Facility: City Heart Institute

****Procedure Requested:****

CPT Code: 75563

Procedure Name: Cardiac magnetic resonance imaging without contrast material(s), followed by contrast material(s) and further sequences

Mr. John Smith, diagnosed with Dilated Cardiomyopathy (ICD-10 I42.0), presents with an elevated BNP level of 450 pg/mL, indicative of significant cardiac dysfunction. The requested Cardiac MRI (CPT 75563) is medically necessary to provide a comprehensive and detailed assessment of myocardial structure, function, and tissue characterization. This advanced imaging will precisely evaluate ventricular volumes, global and regional wall motion, and identify any myocardial fibrosis or edema, which is crucial for accurate staging of his cardiomyopathy, guiding optimal medical management, assessing prognosis, and determining potential eligibility for advanced therapies. This procedure is essential for developing an individualized and effective treatment strategy to improve Mr. Smith's cardiac health and prevent further deterioration.

Supporting clinical documentation, including the clinical justification note, has been submitted concurrently for your review.

Thank you for your prompt attention to this urgent request. Please do not hesitate to contact our office if additional information is required.

Sincerely,

[Your Name/Title - Prior Authorization Specialist on behalf of Dr. Ramesh Kumar]

City Heart Institute

Clinical Summary

Clinical Summary for Prior Authorization

Diagnosis:

I42.0: Dilated Cardiomyopathy

Patient History:

Mr. John Smith, a 58-year-old male (DOB: 1968-03-15), has an established diagnosis of Dilated Cardiomyopathy (DCM). No other significant comorbidities are noted in the current record.

Reason for Procedure:

Prior authorization is requested for CPT code 75563, Cardiac Magnetic Resonance Imaging (MRI) with contrast, for morphology and function. This procedure is essential for a detailed, non-invasive assessment of cardiac chamber volumes, global and regional ventricular function, and myocardial tissue characterization in the context of Mr. Smith's DCM. The findings will provide critical information for guiding ongoing management, assessing disease progression, and optimizing therapeutic interventions.

Supporting Evidence:

Recent laboratory findings from 2026-03-31 demonstrate an elevated B-type Natriuretic Peptide (BNP) level of 450 pg/mL, indicative of significant cardiac strain and consistent with the progression of heart failure in DCM. A metabolic panel performed concurrently was within normal limits. Further detailed clinical rationale is provided in the attached Clinical Justification Note by Dr. Ramesh Kumar.

Clinical Justification:

Cardiac MRI (CPT 75563) is a cornerstone imaging modality for the comprehensive evaluation of cardiomyopathies, including DCM, as per current American College of Cardiology (ACC) / American Heart Association (AHA) guidelines. It offers superior spatial resolution and tissue characterization capabilities, enabling precise quantification of ventricular volumes and ejection fraction, detection of myocardial fibrosis (e.g., late gadolinium enhancement), and differentiation of various etiologies. This procedure is medically necessary to accurately assess disease severity, risk stratify, and inform evidence-based treatment decisions for Mr. Smith, aligning with the standard of care for patients with Dilated Cardiomyopathy.

Requirements Checklist

Requirement	Status	Evidence
Clinical Justification Note: Detailed note from treating Cardiologist explaining medical necessity, including patient history, current symptoms, previous treatments tried, reason echocardiogram is insufficient. Must be signed and dated.	✗ MISSING	A 'Clinical Justification Note' document was uploaded, dated 01/03/2026 and signed by Dr. Ramesh Kumar (Cardiology, NPI: 1234567890). However, the extracted text is a header/footer and does not contain the required detailed clinical content (patient history, symptoms, treatments, reason echo insufficient).
Echocardiogram Report: Most recent report within last 12 months, documenting LVEF value, chamber dimensions, wall motion analysis, and valve function.	✗ MISSING	No 'Echocardiogram Report' document was provided in the uploaded files, and no specific echocardiogram findings (LVEF, chamber dimensions, wall motion, valve function) are present in the EHR data.
Recent Lab Results: Laboratory results within last 30 days including BNP or NT-proBNP levels, complete metabolic panel, and complete blood count.	✗ MISSING	BNP level (450 pg/mL) and a 'Normal' complete metabolic panel are documented in the EHR, with the EHR filled on 2026-03-31, implying recency. However, a complete blood count (CBC) is missing from the provided lab results.
Physician Order Letter: Official order on physician letterhead signed by referring Cardiologist, including procedure requested, ICD-10 diagnosis code, clinical indication, and physician NPI number.	✗ MISSING	While the necessary information (procedure CPT 75563, ICD-10 I42.0, Dr. Ramesh Kumar, NPI 1234567890) is available in the EHR, the official 'Physician Order Letter' document itself is not provided in the uploaded files.
Prior Treatment Records: Documentation of cardiac medications tried for minimum 3 months including drug names, dosages, duration of therapy, and patient response or reason for discontinuation.	✗ MISSING	No 'Prior Treatment Records' document or specific details regarding cardiac medication trials (drug names, dosages, duration, response) are present in the EHR data or uploaded files.
Confirmed diagnosis of Dilated Cardiomyopathy (ICD-10: I42.0), Hypertrophic Cardiomyopathy (ICD-10: I42.1), Restrictive Cardiomyopathy (ICD-10: I42.5), Cardiac Sarcoidosis (ICD-10: D86.85), or Suspected Cardiac Tumor or Mass.	✓ MET	Patient has a primary diagnosis of 'Dilated Cardiomyopathy' with ICD-10 code 'I42.0', which is an approved condition.
Symptoms present and documented for a minimum period of 3 months including: Shortness of breath on exertion, Chest pain or pressure, Palpitations or arrhythmia, Unexplained syncope or near-syncope, or Reduced exercise tolerance.	✗ MISSING	The EHR data does not contain documentation of specific symptoms or confirm their presence for a minimum period of 3 months. The 'Clinical Justification Note' was expected to contain this, but its content is missing.

Completed echocardiogram prior to MRI request, showing LVEF documented value AND Evidence of wall motion abnormality OR Structural cardiac abnormality requiring further characterization.	✗ MISSING	No echocardiogram report or specific findings (LVEF value, wall motion abnormality, or structural cardiac abnormality) are documented in the provided EHR data.
Request ordered by a board-certified Cardiologist or Cardiac Electrophysiologist.	✓ MET	The request is ordered by Dr. Ramesh Kumar, whose specialty is listed as 'Cardiology'.

CITY HEART INSTITUTE

Department of Cardiology | Patient Clinical Notes

Patient Name: John Smith Member ID: UHC-887612 Physician: Dr. Ramesh Kumar
DOB: 03/15/1968 Gender: Male Policy #: UHC-POL-2026-001 NPI: 1234567890
Insurance: United Healthcare Date: 03/01/2026 Specialty: Cardiology

Chief Complaint / Presenting Hx:

57 yr old ♂ w/ progressive dyspnea on exertion x3 months, bilateral ankle edema + orthopnea. No chest pain. PMHx: HTN, DM type 2. Meds: metoprolol, lisinopril, metformin.

Diagnosis:

Dilated Cardiomyopathy ICD-10: I42.0

Examination Findings:

BP: 148/92 mmHg HR: 88 bpm RR: 18/min SpO₂: 96%
Elevated JVP ++. S3 gallop heard at apex. Bilateral basal crepitations. Pitting pedal edema 2+. No murmur.

Investigations / Labs:

BNP: 450 pg/mL ↑ (nl <100)
Metabolic Panel: WNL ✓
ECG: Sinus rhythm, LVH pattern, non-specific ST changes.
Echo (prelim): EF ~30-35%. Diffuse LV hypokinesis.

Procedure Ordered:

Cardiac MRI with Contrast CPT: 75563
Facility: City Heart Institute — Cardiology Dept.
Indications: assess myocardial viability, EF quantification, exclude ischemic etiology, fibrosis mapping (LGE).

Plan / Management:

- 1) Admit for monitoring + IV diuresis (Lasix 40mg BD)
- 2) Optimise GDMT — add spironolactone, uptitrate BB
- 3) Cardiac MRI as above (pre-auth UHC Gold Plus req'd)
- 4) Cardiology f/u in 2 wks post-MRI
- 5) Pt counselled re: sodium restriction, fluid balance, weight monitoring. ICD discussion deferred.

Allergies: NKDA

Group: GRP-7721 Plan: UHC Gold Plus

TRANSTHORACIC ECHOCARDIOGRAM REPORT

Ordering Physician:

Dr. Ramesh Kumar MD

Performing Physician:

Dr. Sarah Johnson MD

Facility:

City Heart Institute

Clinical Indication:

Dilated Cardiomyopathy; Follow up evaluation

Study Date:

January 15, 2026

Report Date:

January 15, 2026

Study Type:

Complete TTE

SECTION 1: TECHNICAL QUALITY

Study Quality: Adequate
Windows: Acceptable acoustic windows obtained.
Views: Parasternal long axis, short axis, apical 4-chamber, 2-chamber, 3-chamber, and subcostal views were successfully obtained and analyzed.

SECTION 2: LEFT VENTRICLE MEASUREMENTS

Measurement	Result	Normal Reference Range
LV End Diastolic Diameter	6.2 cm	Less than 5.5
LV End Systolic Diameter	5.1 cm	Less than 3.9
Interventricular Septum	0.8 cm	0.6 to 1.1
Posterior Wall Thickness	0.8 cm	0.6 to 1.1
LV Ejection Fraction (LVEF)	35%	Greater than 55%
LV Fractional Shortening	18%	25 to 45%

SECTION 3: LEFT VENTRICLE FUNCTION

LVEF: 35% – Severely reduced.
Wall Motion: Diffuse global hypokinesis noted. No regional wall motion abnormalities (RWMA) identified.
Diastolic Function: Grade II diastolic dysfunction (pseudonormal pattern).
LV Size: Moderately dilated left ventricle.

SECTION 4: RIGHT VENTRICLE

RV Size: Normal.
RV Function: Mildly reduced.
TAPSE: 1.6 cm (mildly reduced).
RV Systolic Pressure: Estimated 38 mmHg.

SECTION 5: VALVES

Mitral Valve: Mild mitral regurgitation identified. Etiology appears functional, secondary to LV dilation and annular stretching.
Aortic Valve: Trileaflet, normal opening. No significant stenosis or regurgitation visualized.
Tricuspid Valve: Mild tricuspid regurgitation.
Pulmonic Valve: Normal appearance and function.

SECTION 6: OTHER FINDINGS

Pericardium: Small pericardial effusion noted.

Aorta: Normal aortic root diameter.

IVC: Dilated IVC suggesting elevated right atrial pressure.

SECTION 7: CONCLUSION

1. Severely reduced left ventricular systolic function with LVEF of 35%.
2. Moderately dilated left ventricle consistent with dilated cardiomyopathy.
3. Diffuse global hypokinesis.
4. Mild mitral regurgitation — functional etiology.
5. Grade II diastolic dysfunction.
6. Small pericardial effusion.
7. Recommend Cardiac MRI for further tissue characterization.

Interpreting Physician: Dr. Sarah Johnson MD

Board Certified Echocardiographer

Date: January 15, 2026

Ordering Physician:	Dr. Ramesh Kumar MD	Specimen Type:	Venous Blood
Collection Date:	March 10, 2026	Clinical Indication:	Dilated Cardiomyopathy
Report Date:	March 10, 2026		Cardiac MRI Pre-authorization

SECTION 1 - CARDIAC BIOMARKERS

Test	Result	Unit	Reference Range	Flag
BNP (B-type Natriuretic Peptide)	450	pg/mL	Less than 100	HIGH
NT-proBNP	1850	pg/mL	Less than 125 (age < 75)	HIGH
Troponin I (High Sensitivity)	0.04	ng/mL	Less than 0.04	BORDERLINE

SECTION 2 - COMPLETE BLOOD COUNT

Test	Result	Unit	Reference Range	Flag
WBC	7.2	10^3/uL	4.5 to 11.0	NORMAL
RBC	4.8	10^6/uL	4.5 to 5.9	NORMAL
Hemoglobin	13.8	g/dL	13.5 to 17.5	NORMAL
Hematocrit	41.2	%	41 to 53	NORMAL
Platelets	215	10^3/uL	150 to 400	NORMAL
MCV	88	fL	80 to 100	NORMAL

SECTION 3 - COMPREHENSIVE METABOLIC PANEL

Test	Result	Unit	Reference Range	Flag
Sodium	138	mEq/L	136 to 145	NORMAL
Potassium	4.1	mEq/L	3.5 to 5.1	NORMAL
Creatinine	1.1	mg/dL	0.7 to 1.3	NORMAL
eGFR	72	mL/min	Greater than 60	NORMAL
BUN	18	mg/dL	7 to 20	NORMAL

Test	Result	Unit	Reference Range	Flag
Glucose	95	mg/dL	70 to 100	NORMAL
AST	28	U/L	10 to 40	NORMAL
ALT	22	U/L	7 to 56	NORMAL
Albumin	3.8	g/dL	3.5 to 5.0	NORMAL

SECTION 4 - LIPID PANEL

Test	Result	Unit	Reference Range	Flag
Total Cholesterol	195	mg/dL	Less than 200	NORMAL
LDL	118	mg/dL	Less than 130	NORMAL
HDL	42	mg/dL	Greater than 40	NORMAL
Triglycerides	175	mg/dL	Less than 150	BORDERLINE HIGH

SECTION 5 - INTERPRETATION NOTE

Significantly elevated BNP at 450 pg/mL and NT-proBNP at 1850 pg/mL consistent with moderate to severe heart failure.
Renal function preserved. Electrolytes within normal limits.
Results support ongoing heart failure management and prior authorization for advanced cardiac imaging.

SUBJECT: PRIOR AUTHORIZATION REQUEST

PROCEDURE: CARDIAC MRI WITH CONTRAST (CPT 75563)

ICD-10 CODE: I42.0

REQUESTED PROCEDURE

Name:	Cardiac MRI with Contrast
CPT Code:	75563
Urgency:	Routine — Non Emergency
Facility:	City Heart Institute Radiology
Estimated Date:	Within 30 days of approval

CLINICAL INDICATION

Primary Diagnosis: Dilated Cardiomyopathy (ICD-10: I42.0)

Secondary Diagnosis: Heart Failure with Reduced Ejection Fraction (ICD-10: I50.20)

MEDICAL NECESSITY STATEMENT

This procedure is medically necessary for:

- Tissue characterization of myocardium
- Assessment of myocardial fibrosis via late gadolinium enhancement imaging
- Differentiation of ischemic versus non-ischemic cardiomyopathy
- Assessment of myocardial viability
- Guidance of treatment decisions including consideration of ICD implantation

SUPPORTING CLINICAL INFORMATION

- LVEF 35% on recent echocardiogram
- Elevated BNP 450 pg/mL
- NYHA Class III symptoms
- Optimal medical therapy ongoing
- No contraindications to MRI or gadolinium contrast media

I certify that this procedure is medically necessary and appropriate for this patient. All information provided is accurate and complete to the best of my knowledge.

Dr. Ramesh Kumar MD
Board Certified Cardiologist
Date: March 16, 2026
NPI: 1234567890
Contact: 555-123-4567

Treating Physician:	Dr. Ramesh Kumar MD	Report Date:	March 16, 2026
Facility:	City Heart Institute	Specialty:	Cardiology
Period Covered:	Jan 2023 – Mar 2026	Clinical Indication:	Dilated Cardiomyopathy

This document summarizes the complete cardiac medication history for a patient with confirmed Dilated Cardiomyopathy (ICD-10: I42.0) over a period of 3 years from January 2023 to March 2026. All medications listed below were prescribed and monitored by the treating cardiologist as part of optimal medical therapy for heart failure with reduced ejection fraction.

SECTION 1 - MEDICATION HISTORY TABLE

Medication	Dose/ Freq	Dates	Duration	Response	Status
Carvedilol (Beta Blocker)	25mg Twice daily	Jan 2023 – Present	3 years	Partial response – HR controlled but symptoms persist	CURRENT
Lisinopril (ACE Inhibitor)	10mg Once daily	Jan 2023 – Present	3 years	Partial response – BP controlled but LVEF unchanged	CURRENT
Spirolactone (Aldo. Antagonist)	25mg Once daily	Mar 2023 – Present	2y 9mo	Minimal improvement in symptoms	CURRENT
Furosemide (Loop Diuretic)	40mg Once daily	Mar 2023 – Present	2y 9mo	Adequate fluid control; edema managed	CURRENT
Sacubitril/ Valsartan (ARNI)	24/26mg Twice daily	Sep 2023 – Nov 2023	2 months	Discontinued due to symptomatic hypotension and dizziness	DISCONTINUED
Ivabradine	5mg Twice daily	Jan 2024 – Mar 2024	2 months	Discontinued – inadequate heart rate reduction	DISCONTINUED

SECTION 2 - TREATMENT RESPONSE SUMMARY

Despite 3 years of optimal medical therapy with maximum tolerated doses of guideline directed medical therapy (GDMT) including beta blocker, ACE inhibitor, and aldosterone antagonist, patient continues to exhibit:

- Persistent LVEF of 35%
- NYHA Class III symptoms (marked limitation in activity)
- Elevated BNP levels (refer to lab report dated 03/10/2026)
- Reduced functional capacity

SECTION 3 - CURRENT MEDICATION LIST

- **Carvedilol:** 25mg twice daily
- **Lisinopril:** 10mg once daily
- **Spironolactone:** 25mg once daily
- **Furosemide:** 40mg once daily
- **Aspirin:** 81mg once daily
- **Atorvastatin:** 40mg once daily

Physician Attestation:

I certify that the above medication history is accurate and complete. The patient has received optimal guideline directed medical therapy for a minimum of 3 years with inadequate clinical response. Advanced cardiac imaging (Cardiac MRI) is required to guide further treatment decisions, including viability assessment and potential ICD placement.

Dr. Ramesh Kumar MD

Board Certified Cardiologist | NPI: 1234567890

Date: March 16, 2026
