CITY HEART INSTITUTE

Department of Cardiology | Patient Clinical Notes

Patient Name: John Smith Member ID: UHC-887612 Physician: Dr. Ramesh Kumar
DOB: 03/15/1968 Gender: Male Policy #: UHC-POL-2026-001 NPI: 1234567890
Insurance: United Healthcare Date: 03/01/2026 Specialty: Cardiology

Chief Complaint / Presenting Hx:

57 yr old ♂ w/ progressive dyspnea on exertion x3 months, bilateral ankle edema + orthopnea. No chest pain. PMHx: HTN, DM type 2. Meds: metoprolol, lisinopril, metformin.

Diagnosis:

Dilated Cardiomyopathy ICD-10: I42.0

Examination Findings:

BP: 148/92 mmHg HR: 88 bpm RR: 18/min SpO₂: 96%
Elevated JVP ++. S3 gallop heard at apex. Bilateral basal crepitations. Pitting pedal edema 2+. No murmur.

Investigations / Labs:

BNP: 450 pg/mL ↑ (nl <100)
Metabolic Panel: WNL ✓
ECG: Sinus rhythm, LVH pattern, non-specific ST changes.
Echo (prelim): EF ~30-35%. Diffuse LV hypokinesis.

Procedure Ordered:

Cardiac MRI with Contrast CPT: 75563
Facility: City Heart Institute — Cardiology Dept.
Indications: assess myocardial viability, EF quantification, exclude ischemic etiology, fibrosis mapping (LGE).

Plan / Management:

- 1) Admit for monitoring + IV diuresis (Lasix 40mg BD)
- 2) Optimise GDMT — add spironolactone, uptitrate BB
- 3) Cardiac MRI as above (pre-auth UHC Gold Plus req'd)
- 4) Cardiology f/u in 2 wks post-MRI
- 5) Pt counselled re: sodium restriction, fluid balance, weight monitoring. ICD discussion deferred.

Allergies: NKDA

Group: GRP-7721 Plan: UHC Gold Plus

TRANSTHORACIC ECHOCARDIOGRAM REPORT

Ordering Physician:

Dr. Ramesh Kumar MD

Performing Physician:

Dr. Sarah Johnson MD

Facility:

City Heart Institute

Clinical Indication:

Dilated Cardiomyopathy; Follow up evaluation

Study Date:

January 15, 2026

Report Date:

January 15, 2026

Study Type:

Complete TTE

SECTION 1: TECHNICAL QUALITY

Study Quality: Adequate

Windows: Acceptable acoustic windows obtained.

Views: Parasternal long axis, short axis, apical 4-chamber, 2-chamber, 3-chamber, and subcostal views were successfully obtained and analyzed.

SECTION 2: LEFT VENTRICLE MEASUREMENTS

Measurement	Result	Normal Reference Range
LV End Diastolic Diameter	6.2 cm	Less than 5.5
LV End Systolic Diameter	5.1 cm	Less than 3.9
Interventricular Septum	0.8 cm	0.6 to 1.1
Posterior Wall Thickness	0.8 cm	0.6 to 1.1
LV Ejection Fraction (LVEF)	35%	Greater than 55%
LV Fractional Shortening	18%	25 to 45%

SECTION 3: LEFT VENTRICLE FUNCTION

LVEF: 35% – Severely reduced.

Wall Motion: Diffuse global hypokinesis noted. No regional wall motion abnormalities (RWMA) identified.

Diastolic Function: Grade II diastolic dysfunction (pseudonormal pattern).

LV Size: Moderately dilated left ventricle.

SECTION 4: RIGHT VENTRICLE

RV Size: Normal.

RV Function: Mildly reduced.

TAPSE: 1.6 cm (mildly reduced).

RV Systolic Pressure: Estimated 38 mmHg.

SECTION 5: VALVES

Mitral Valve: Mild mitral regurgitation identified. Etiology appears functional, secondary to LV dilation and annular stretching.

Aortic Valve: Trileaflet, normal opening. No significant stenosis or regurgitation visualized.

Tricuspid Valve: Mild tricuspid regurgitation.

Pulmonic Valve: Normal appearance and function.

SECTION 6: OTHER FINDINGS

Pericardium: Small pericardial effusion noted.

Aorta: Normal aortic root diameter.

IVC: Dilated IVC suggesting elevated right atrial pressure.

SECTION 7: CONCLUSION

1. Severely reduced left ventricular systolic function with LVEF of 35%.
2. Moderately dilated left ventricle consistent with dilated cardiomyopathy.
3. Diffuse global hypokinesis.
4. Mild mitral regurgitation — functional etiology.
5. Grade II diastolic dysfunction.
6. Small pericardial effusion.
7. Recommend Cardiac MRI for further tissue characterization.

Interpreting Physician: Dr. Sarah Johnson MD

Board Certified Echocardiographer

Date: January 15, 2026

Ordering Physician:	Dr. Ramesh Kumar MD	Specimen Type:	Venous Blood
Collection Date:	March 10, 2026	Clinical Indication:	Dilated Cardiomyopathy
Report Date:	March 10, 2026		Cardiac MRI Pre-authorization

SECTION 1 - CARDIAC BIOMARKERS

Test	Result	Unit	Reference Range	Flag
BNP (B-type Natriuretic Peptide)	450	pg/mL	Less than 100	HIGH
NT-proBNP	1850	pg/mL	Less than 125 (age < 75)	HIGH
Troponin I (High Sensitivity)	0.04	ng/mL	Less than 0.04	BORDERLINE

SECTION 2 - COMPLETE BLOOD COUNT

Test	Result	Unit	Reference Range	Flag
WBC	7.2	10^3/uL	4.5 to 11.0	NORMAL
RBC	4.8	10^6/uL	4.5 to 5.9	NORMAL
Hemoglobin	13.8	g/dL	13.5 to 17.5	NORMAL
Hematocrit	41.2	%	41 to 53	NORMAL
Platelets	215	10^3/uL	150 to 400	NORMAL
MCV	88	fL	80 to 100	NORMAL

SECTION 3 - COMPREHENSIVE METABOLIC PANEL

Test	Result	Unit	Reference Range	Flag
Sodium	138	mEq/L	136 to 145	NORMAL
Potassium	4.1	mEq/L	3.5 to 5.1	NORMAL
Creatinine	1.1	mg/dL	0.7 to 1.3	NORMAL
eGFR	72	mL/min	Greater than 60	NORMAL
BUN	18	mg/dL	7 to 20	NORMAL

Test	Result	Unit	Reference Range	Flag
Glucose	95	mg/dL	70 to 100	NORMAL
AST	28	U/L	10 to 40	NORMAL
ALT	22	U/L	7 to 56	NORMAL
Albumin	3.8	g/dL	3.5 to 5.0	NORMAL

SECTION 4 - LIPID PANEL

Test	Result	Unit	Reference Range	Flag
Total Cholesterol	195	mg/dL	Less than 200	NORMAL
LDL	118	mg/dL	Less than 130	NORMAL
HDL	42	mg/dL	Greater than 40	NORMAL
Triglycerides	175	mg/dL	Less than 150	BORDERLINE HIGH

SECTION 5 - INTERPRETATION NOTE

Significantly elevated BNP at 450 pg/mL and NT-proBNP at 1850 pg/mL consistent with moderate to severe heart failure.
Renal function preserved. Electrolytes within normal limits.
Results support ongoing heart failure management and prior authorization for advanced cardiac imaging.

SUBJECT: PRIOR AUTHORIZATION REQUEST

PROCEDURE: CARDIAC MRI WITH CONTRAST (CPT 75563)

ICD-10 CODE: I42.0

REQUESTED PROCEDURE

Name:	Cardiac MRI with Contrast
CPT Code:	75563
Urgency:	Routine — Non Emergency
Facility:	City Heart Institute Radiology
Estimated Date:	Within 30 days of approval

CLINICAL INDICATION

Primary Diagnosis: Dilated Cardiomyopathy (ICD-10: I42.0)

Secondary Diagnosis: Heart Failure with Reduced Ejection Fraction (ICD-10: I50.20)

MEDICAL NECESSITY STATEMENT

This procedure is medically necessary for:

- Tissue characterization of myocardium
- Assessment of myocardial fibrosis via late gadolinium enhancement imaging
- Differentiation of ischemic versus non-ischemic cardiomyopathy
- Assessment of myocardial viability
- Guidance of treatment decisions including consideration of ICD implantation

SUPPORTING CLINICAL INFORMATION

- LVEF 35% on recent echocardiogram
- Elevated BNP 450 pg/mL
- NYHA Class III symptoms
- Optimal medical therapy ongoing
- No contraindications to MRI or gadolinium contrast media

I certify that this procedure is medically necessary and appropriate for this patient. All information provided is accurate and complete to the best of my knowledge.

Treating Physician:	Dr. Ramesh Kumar MD	Report Date:	March 16, 2026
Facility:	City Heart Institute	Specialty:	Cardiology
Period Covered:	Jan 2023 – Mar 2026	Clinical Indication:	Dilated Cardiomyopathy

This document summarizes the complete cardiac medication history for a patient with confirmed Dilated Cardiomyopathy (ICD-10: I42.0) over a period of 3 years from January 2023 to March 2026. All medications listed below were prescribed and monitored by the treating cardiologist as part of optimal medical therapy for heart failure with reduced ejection fraction.

SECTION 1 - MEDICATION HISTORY TABLE

Medication	Dose/ Freq	Dates	Duration	Response	Status
Carvedilol (Beta Blocker)	25mg Twice daily	Jan 2023 – Present	3 years	Partial response – HR controlled but symptoms persist	CURRENT
Lisinopril (ACE Inhibitor)	10mg Once daily	Jan 2023 – Present	3 years	Partial response – BP controlled but LVEF unchanged	CURRENT
Spirolactone (Aldo. Antagonist)	25mg Once daily	Mar 2023 – Present	2y 9mo	Minimal improvement in symptoms	CURRENT
Furosemide (Loop Diuretic)	40mg Once daily	Mar 2023 – Present	2y 9mo	Adequate fluid control; edema managed	CURRENT
Sacubitril/ Valsartan (ARNI)	24/26mg Twice daily	Sep 2023 – Nov 2023	2 months	Discontinued due to symptomatic hypotension and dizziness	DISCONTINUED
Ivabradine	5mg Twice daily	Jan 2024 – Mar 2024	2 months	Discontinued – inadequate heart rate reduction	DISCONTINUED

SECTION 2 - TREATMENT RESPONSE SUMMARY

Despite 3 years of optimal medical therapy with maximum tolerated doses of guideline directed medical therapy (GDMT) including beta blocker, ACE inhibitor, and aldosterone antagonist, patient continues to exhibit:

- Persistent LVEF of 35%
- NYHA Class III symptoms (marked limitation in activity)
- Elevated BNP levels (refer to lab report dated 03/10/2026)
- Reduced functional capacity

SECTION 3 - CURRENT MEDICATION LIST

- **Carvedilol:** 25mg twice daily
- **Lisinopril:** 10mg once daily
- **Spironolactone:** 25mg once daily
- **Furosemide:** 40mg once daily
- **Aspirin:** 81mg once daily
- **Atorvastatin:** 40mg once daily

Physician Attestation:

I certify that the above medication history is accurate and complete. The patient has received optimal guideline directed medical therapy for a minimum of 3 years with inadequate clinical response. Advanced cardiac imaging (Cardiac MRI) is required to guide further treatment decisions, including viability assessment and potential ICD placement.

Dr. Ramesh Kumar MD

Board Certified Cardiologist | NPI: 1234567890
