

PRIOR AUTHORIZATION REQUEST

Cover Letter

Patient Name	John Smith
Date of Birth	1968-03-15
Insurance	United Healthcare
Member ID	UHC-887612
Policy Number	UHC-POL-2026-001
CPT Code	75563
ICD-10	I42.0
Physician	Dr. Ramesh Kumar
Physician NPI	1234567890
Facility	City Heart Institute
Date of Request	March 31, 2026

Dear Prior Authorization Review Team,

This letter serves as a formal request for prior authorization for a Cardiac MRI with Contrast (CPT Code: 75563) for our patient, John Smith.

Patient Information:

Name: John Smith

Date of Birth: 1968-03-15

Member ID: UHC-887612

Policy Number: UHC-POL-2026-001

Group Number: GRP-7721

Plan Name: UHC Gold Plus

Requesting Physician:

Name: Dr. Ramesh Kumar

NPI: 1234567890

Specialty: Cardiology

Facility: City Heart Institute

Diagnosis:

Primary: Dilated Cardiomyopathy (ICD-10: I42.0)

Procedure Requested:

Cardiac MRI with Contrast (CPT Code: 75563)

Clinical Justification:

Mr. Smith presents with a confirmed diagnosis of Dilated Cardiomyopathy (I42.0) and Heart Failure with Reduced Ejection Fraction (I50.20). A recent Transthoracic Echocardiogram (January 15, 2026) revealed severely reduced Left Ventricular Ejection Fraction (LVEF) of 35%, moderately dilated LV with diffuse global hypokinesis, and Grade II diastolic dysfunction. Laboratory results show significantly elevated BNP at 450 pg/mL. Despite 3 years of optimal guideline-directed medical therapy (including Carvedilol, Lisinopril, Spironolactone, and Furosemide), Mr. Smith continues to experience persistent NYHA Class III symptoms and reduced functional capacity.

The Cardiac MRI is medically necessary for comprehensive myocardial tissue characterization, assessment of myocardial fibrosis via late gadolinium enhancement, differentiation between ischemic and non-ischemic cardiomyopathy, and viability assessment. This advanced imaging is crucial for guiding further treatment decisions, including potential consideration for an implantable cardioverter-defibrillator (ICD), which cannot be adequately determined by echocardiography alone.

All supporting clinical documentation, including the echocardiogram report, recent lab results, physician order, and prior treatment records, has been submitted for your review. We believe this procedure is medically necessary and will significantly aid in the optimal management of Mr. Smith's complex cardiac condition.

Thank you for your prompt attention to this request.

Sincerely,

Dr. Ramesh Kumar, MD

Cardiology

City Heart Institute

Date: March 31, 2026

Clinical Summary

DIAGNOSIS

Primary: Dilated Cardiomyopathy (ICD-10: I42.0)

Secondary: Heart Failure with Reduced Ejection Fraction (ICD-10: I50.20)

PATIENT HISTORY

John Smith, male, born 1968-03-15, has a confirmed diagnosis of Dilated Cardiomyopathy. He has been on optimal guideline-directed medical therapy (GDMT) for approximately three years, including Carvedilol 25mg BID, Lisinopril 10mg QD, Spironolactone 25mg QD, and Furosemide 40mg QD. Previous attempts with Sacubitril/Valsartan and Ivabradine were discontinued due to symptomatic hypotension/dizziness and inadequate heart rate reduction, respectively. Despite prolonged GDMT, Mr. Smith continues to exhibit persistent NYHA Class III symptoms, reduced functional capacity, and an LVEF of 35%.

REASON FOR PROCEDURE

A Cardiac MRI with Contrast (CPT 75563) is requested for comprehensive myocardial tissue characterization, assessment of myocardial fibrosis (late gadolinium enhancement), differentiation of ischemic vs. non-ischemic cardiomyopathy, and viability assessment. This information is vital for guiding further treatment decisions, including potential ICD implantation, which cannot be fully obtained from echocardiography alone.

SUPPORTING EVIDENCE

- ****Echocardiogram (Jan 15, 2026):**** Revealed severely reduced LV systolic function (LVEF 35%), moderately dilated LV (End Diastolic Diameter: 6.2 cm) with diffuse global hypokinesis, Grade II diastolic dysfunction, and mild functional mitral regurgitation. The report recommended Cardiac MRI for further tissue characterization.
- ****Laboratory Results:**** BNP 450 pg/mL (HIGH) and NT-proBNP 1850 pg/mL (HIGH), consistent with moderate to severe heart failure. Renal function (Creatinine 1.1 mg/dL, eGFR 72 mL/min) and CBC are within normal limits.
- ****Prior Treatment Records:**** Document 3 years of optimal GDMT with inadequate clinical response, persistent LVEF of 35%, and NYHA Class III symptoms.
- ****Physician Order:**** Dr. Ramesh Kumar, a board-certified Cardiologist, has ordered the Cardiac MRI, citing medical necessity for tissue characterization and treatment guidance.

CLINICAL JUSTIFICATION

Given Mr. Smith's persistent severe LV dysfunction (LVEF 35%), ongoing NYHA Class III symptoms despite prolonged optimal GDMT, and elevated cardiac biomarkers, a Cardiac MRI is medically necessary. The echocardiogram findings necessitate further detailed myocardial assessment to characterize the extent of fibrosis, differentiate etiology, and inform critical treatment decisions that cannot be fully achieved with echocardiography alone. This advanced imaging will directly impact patient management and prognosis.

Requirements Checklist

Requirement	Status	Evidence
Detailed note from treating Cardiologist explaining medical necessity. Must include: patient history, current symptoms, previous treatments tried, reason echocardiogram is insufficient. Must be signed and dated.	✗ MISSING	Uploaded file 'Clinical Justification Note' contains only header/footer, missing required clinical details. Relevant clinical details are provided across other submitted documents (Physician Order, Prior Treatment Records).
Most recent echocardiogram report within last 12 months. Must document LVEF value, chamber dimensions, wall motion analysis, and valve function.	✓ MET	Transthoracic Echocardiogram Report, Date of Study: January 15, 2026. LVEF: 35%, LV End Diastolic Diameter: 6.2 cm, Diffuse global hypokinesia, Mild mitral regurgitation.
Laboratory results within last 30 days including: BNP or NT-proBNP levels, complete metabolic panel, complete blood count.	✓ MET	Laboratory Results Report. BNP: 450 pg/mL, NT-proBNP: 1850 pg/mL. Complete Metabolic Panel: Normal. Complete Blood Count: All values within normal limits.
Official order on physician letterhead signed by referring Cardiologist. Must include: procedure requested, ICD-10 diagnosis code, clinical indication, physician NPI number.	✓ MET	Physician Order Prior Auth Cardiac MRI, Date of Request: March 16, 2026. Requested Procedure: Cardiac MRI with Contrast (CPT 75563). Diagnosis: Dilated Cardiomyopathy (I42.0). Requesting Physician: Dr. Ramesh Kumar MD, NPI: 1234567890.
Documentation of cardiac medications tried for minimum 3 months including drug names, dosages, duration of therapy, and patient response or reason for discontinuation.	✓ MET	Cardiac Medication History Report, Period Covered: Jan 2023 – Mar 2026. Details Carvedilol, Lisinopril, Spironolactone, Furosemide with dosages, duration, and response. Lists discontinued medications (Sacubitril/Valsartan, Ivabradine) with reasons.
Patient must have a confirmed diagnosis of one of the following conditions: Dilated Cardiomyopathy (ICD-10: I42.0), Hypertrophic Cardiomyopathy (ICD-10: I42.1), Restrictive Cardiomyopathy (ICD-10: I42.5), Cardiac Sarcoidosis (ICD-10: D86.85), or Suspected Cardiac Tumor or Mass.	✓ MET	Primary Diagnosis: Dilated Cardiomyopathy (ICD-10: I42.0) as per EHR and Physician Order.
Symptoms must be present and documented for a minimum period of 3 months including: Shortness of breath on exertion, Chest pain or pressure, Palpitations or arrhythmia, Unexplained syncope or near-syncope, or Reduced exercise tolerance.	✓ MET	NYHA Class III symptoms, persistent for 3 years despite GDMT, including reduced functional capacity and shortness of breath (Prior Treatment Records, Physician Order).

Patient must have completed echocardiogram prior to MRI request. Echocardiogram must show: LVEF (Left Ventricular Ejection Fraction) documented value, AND Evidence of wall motion abnormality OR Structural cardiac abnormality requiring further characterization.	✓ MET	Transthoracic Echocardiogram Report (Jan 15, 2026) documents LVEF 35%, diffuse global hypokinesis, and moderately dilated LV.
Request must be ordered by a board-certified Cardiologist or Cardiac Electrophysiologist.	✓ MET	Requesting Physician: Dr. Ramesh Kumar MD, Board Certified Cardiologist (Physician Order, Prior Treatment Records).

CITY HEART INSTITUTE

Department of Cardiology | Patient Clinical Notes

Patient Name: John Smith Member ID: UHC-887612 Physician: Dr. Ramesh Kumar
DOB: 03/15/1968 Gender: Male Policy #: UHC-POL-2026-001 NPI: 1234567890
Insurance: United Healthcare Date: 03/01/2026 Specialty: Cardiology

Chief Complaint / Presenting Hx:

57 yr old ♂ w/ progressive dyspnea on exertion x3 months, bilateral ankle edema + orthopnea. No chest pain. PMHx: HTN, DM type 2. Meds: metoprolol, lisinopril, metformin.

Diagnosis:

Dilated Cardiomyopathy ICD-10: I42.0

Examination Findings:

BP: 148/92 mmHg HR: 88 bpm RR: 18/min SpO₂: 96%
Elevated JVP ++. S3 gallop heard at apex. Bilateral basal crepitations. Pitting pedal edema 2+. No murmur.

Investigations / Labs:

BNP: 450 pg/mL ↑ (nl <100)
Metabolic Panel: WNL ✓
ECG: Sinus rhythm, LVH pattern, non-specific ST changes.
Echo (prelim): EF ~30-35%. Diffuse LV hypokinesis.

Procedure Ordered:

Cardiac MRI with Contrast CPT: 75563
Facility: City Heart Institute — Cardiology Dept.
Indications: assess myocardial viability, EF quantification, exclude ischemic etiology, fibrosis mapping (LGE).

Plan / Management:

- 1) Admit for monitoring + IV diuresis (Lasix 40mg BD)
- 2) Optimise GDMT — add spironolactone, uptitrate BB
- 3) Cardiac MRI as above (pre-auth UHC Gold Plus req'd)
- 4) Cardiology f/u in 2 wks post-MRI
- 5) Pt counselled re: sodium restriction, fluid balance, weight monitoring. ICD discussion deferred.

Allergies: NKDA

TRANSTHORACIC ECHOCARDIOGRAM REPORT

Ordering Physician:

Dr. Ramesh Kumar MD

Performing Physician:

Dr. Sarah Johnson MD

Facility:

City Heart Institute

Clinical Indication:

Dilated Cardiomyopathy; Follow up evaluation

Study Date:

January 15, 2026

Report Date:

January 15, 2026

Study Type:

Complete TTE

SECTION 1: TECHNICAL QUALITY

Study Quality: Adequate

Windows: Acceptable acoustic windows obtained.

Views: Parasternal long axis, short axis, apical 4-chamber, 2-chamber, 3-chamber, and subcostal views were successfully obtained and analyzed.

SECTION 2: LEFT VENTRICLE MEASUREMENTS

Measurement	Result	Normal Reference Range
LV End Diastolic Diameter	6.2 cm	Less than 5.5
LV End Systolic Diameter	5.1 cm	Less than 3.9
Interventricular Septum	0.8 cm	0.6 to 1.1
Posterior Wall Thickness	0.8 cm	0.6 to 1.1
LV Ejection Fraction (LVEF)	35%	Greater than 55%
LV Fractional Shortening	18%	25 to 45%

SECTION 3: LEFT VENTRICLE FUNCTION

LVEF: 35% – Severely reduced.

Wall Motion: Diffuse global hypokinesis noted. No regional wall motion abnormalities (RWMA) identified.

Diastolic Function: Grade II diastolic dysfunction (pseudonormal pattern).

LV Size: Moderately dilated left ventricle.

SECTION 4: RIGHT VENTRICLE

RV Size: Normal.

RV Function: Mildly reduced.

TAPSE: 1.6 cm (mildly reduced).

RV Systolic Pressure: Estimated 38 mmHg.

SECTION 5: VALVES

Mitral Valve: Mild mitral regurgitation identified. Etiology appears functional, secondary to LV dilation and annular stretching.

Aortic Valve: Trileaflet, normal opening. No significant stenosis or regurgitation visualized.

Tricuspid Valve: Mild tricuspid regurgitation.

Pulmonic Valve: Normal appearance and function.

SECTION 6: OTHER FINDINGS

Pericardium: Small pericardial effusion noted.

Aorta: Normal aortic root diameter.

IVC: Dilated IVC suggesting elevated right atrial pressure.

SECTION 7: CONCLUSION

1. Severely reduced left ventricular systolic function with LVEF of 35%.
2. Moderately dilated left ventricle consistent with dilated cardiomyopathy.
3. Diffuse global hypokinesis.
4. Mild mitral regurgitation — functional etiology.
5. Grade II diastolic dysfunction.
6. Small pericardial effusion.
7. Recommend Cardiac MRI for further tissue characterization.

Interpreting Physician: Dr. Sarah Johnson MD

Board Certified Echocardiographer

Date: January 15, 2026

Ordering Physician:	Dr. Ramesh Kumar MD	Specimen Type:	Venous Blood
Collection Date:	March 10, 2026	Clinical Indication:	Dilated Cardiomyopathy
Report Date:	March 10, 2026		Cardiac MRI Pre-authorization

SECTION 1 - CARDIAC BIOMARKERS

Test	Result	Unit	Reference Range	Flag
BNP (B-type Natriuretic Peptide)	450	pg/mL	Less than 100	HIGH
NT-proBNP	1850	pg/mL	Less than 125 (age < 75)	HIGH
Troponin I (High Sensitivity)	0.04	ng/mL	Less than 0.04	BORDERLINE

SECTION 2 - COMPLETE BLOOD COUNT

Test	Result	Unit	Reference Range	Flag
WBC	7.2	10^3/uL	4.5 to 11.0	NORMAL
RBC	4.8	10^6/uL	4.5 to 5.9	NORMAL
Hemoglobin	13.8	g/dL	13.5 to 17.5	NORMAL
Hematocrit	41.2	%	41 to 53	NORMAL
Platelets	215	10^3/uL	150 to 400	NORMAL
MCV	88	fL	80 to 100	NORMAL

SECTION 3 - COMPREHENSIVE METABOLIC PANEL

Test	Result	Unit	Reference Range	Flag
Sodium	138	mEq/L	136 to 145	NORMAL
Potassium	4.1	mEq/L	3.5 to 5.1	NORMAL
Creatinine	1.1	mg/dL	0.7 to 1.3	NORMAL
eGFR	72	mL/min	Greater than 60	NORMAL
BUN	18	mg/dL	7 to 20	NORMAL

Test	Result	Unit	Reference Range	Flag
Glucose	95	mg/dL	70 to 100	NORMAL
AST	28	U/L	10 to 40	NORMAL
ALT	22	U/L	7 to 56	NORMAL
Albumin	3.8	g/dL	3.5 to 5.0	NORMAL

SECTION 4 - LIPID PANEL

Test	Result	Unit	Reference Range	Flag
Total Cholesterol	195	mg/dL	Less than 200	NORMAL
LDL	118	mg/dL	Less than 130	NORMAL
HDL	42	mg/dL	Greater than 40	NORMAL
Triglycerides	175	mg/dL	Less than 150	BORDERLINE HIGH

SECTION 5 - INTERPRETATION NOTE

Significantly elevated BNP at 450 pg/mL and NT-proBNP at 1850 pg/mL consistent with moderate to severe heart failure.
Renal function preserved. Electrolytes within normal limits.
Results support ongoing heart failure management and prior authorization for advanced cardiac imaging.

SUBJECT: PRIOR AUTHORIZATION REQUEST

PROCEDURE: CARDIAC MRI WITH CONTRAST (CPT 75563)

ICD-10 CODE: I42.0

REQUESTED PROCEDURE

Name:	Cardiac MRI with Contrast
CPT Code:	75563
Urgency:	Routine — Non Emergency
Facility:	City Heart Institute Radiology
Estimated Date:	Within 30 days of approval

CLINICAL INDICATION

Primary Diagnosis: Dilated Cardiomyopathy (ICD-10: I42.0)

Secondary Diagnosis: Heart Failure with Reduced Ejection Fraction (ICD-10: I50.20)

MEDICAL NECESSITY STATEMENT

This procedure is medically necessary for:

- Tissue characterization of myocardium
- Assessment of myocardial fibrosis via late gadolinium enhancement imaging
- Differentiation of ischemic versus non-ischemic cardiomyopathy
- Assessment of myocardial viability
- Guidance of treatment decisions including consideration of ICD implantation

SUPPORTING CLINICAL INFORMATION

- LVEF 35% on recent echocardiogram
- Elevated BNP 450 pg/mL
- NYHA Class III symptoms
- Optimal medical therapy ongoing
- No contraindications to MRI or gadolinium contrast media

I certify that this procedure is medically necessary and appropriate for this patient. All information provided is accurate and complete to the best of my knowledge.

Dr. Ramesh Kumar MD
Board Certified Cardiologist
Date: March 16, 2026
NPI: 1234567890
Contact: 555-123-4567

Treating Physician:	Dr. Ramesh Kumar MD	Report Date:	March 16, 2026
Facility:	City Heart Institute	Specialty:	Cardiology
Period Covered:	Jan 2023 – Mar 2026	Clinical Indication:	Dilated Cardiomyopathy

This document summarizes the complete cardiac medication history for a patient with confirmed Dilated Cardiomyopathy (ICD-10: I42.0) over a period of 3 years from January 2023 to March 2026. All medications listed below were prescribed and monitored by the treating cardiologist as part of optimal medical therapy for heart failure with reduced ejection fraction.

SECTION 1 - MEDICATION HISTORY TABLE

Medication	Dose/ Freq	Dates	Duration	Response	Status
Carvedilol (Beta Blocker)	25mg Twice daily	Jan 2023 – Present	3 years	Partial response – HR controlled but symptoms persist	CURRENT
Lisinopril (ACE Inhibitor)	10mg Once daily	Jan 2023 – Present	3 years	Partial response – BP controlled but LVEF unchanged	CURRENT
Spirololactone (Aldo. Antagonist)	25mg Once daily	Mar 2023 – Present	2y 9mo	Minimal improvement in symptoms	CURRENT
Furosemide (Loop Diuretic)	40mg Once daily	Mar 2023 – Present	2y 9mo	Adequate fluid control; edema managed	CURRENT
Sacubitril/ Valsartan (ARNI)	24/26mg Twice daily	Sep 2023 – Nov 2023	2 months	Discontinued due to symptomatic hypotension and dizziness	DISCONTINUED
Ivabradine	5mg Twice daily	Jan 2024 – Mar 2024	2 months	Discontinued – inadequate heart rate reduction	DISCONTINUED

SECTION 2 - TREATMENT RESPONSE SUMMARY

Despite 3 years of optimal medical therapy with maximum tolerated doses of guideline directed medical therapy (GDMT) including beta blocker, ACE inhibitor, and aldosterone antagonist, patient continues to exhibit:

- Persistent LVEF of 35%
- NYHA Class III symptoms (marked limitation in activity)
- Elevated BNP levels (refer to lab report dated 03/10/2026)
- Reduced functional capacity

SECTION 3 - CURRENT MEDICATION LIST

- **Carvedilol:** 25mg twice daily
- **Lisinopril:** 10mg once daily
- **Spironolactone:** 25mg once daily
- **Furosemide:** 40mg once daily
- **Aspirin:** 81mg once daily
- **Atorvastatin:** 40mg once daily

Physician Attestation:

I certify that the above medication history is accurate and complete. The patient has received optimal guideline directed medical therapy for a minimum of 3 years with inadequate clinical response. Advanced cardiac imaging (Cardiac MRI) is required to guide further treatment decisions, including viability assessment and potential ICD placement.

Dr. Ramesh Kumar MD

Board Certified Cardiologist | NPI: 1234567890
